

Advanced Instructions for Removing Panels on **HONDA GROM / MSX 125**

1. Remove 4 screws from both the left and right side panels.
Reference pictures Left (L 1, 2) and Right (R 1, 2)
2. Remove push rivet and screw from both the left and right side panels.
Reference pictures Left (L 3, 4) and Right (R 5, 6)
3. Remove screw on the rear of the left side panel which is next to rear shock.
Reference picture Left (L 5)
4. You should now be able to remove the left side panel by lifting up and pulling out. There is a hook by the air filter and a locking pin on the gas tank. You may need to wiggle the panel around in order to fully remove it. **When re-installing, it is important to re-align the hook with its corresponding oval mount point.**
5. Remove the silver center piece with a 5mm Allen screw.
